Celtec Displayboard is a foamed polyvinyl chloride (PVC) sheet whose extraordinary combination of features makes it ideal for signage, exhibits, store displays, POP, Kiosks, screen printing and more.

The surface is a smooth matte finish that makes it ideal to paint or laminate to secondary substrates. Celtec also has good screw and

staple retention which makes it ideal for stage prop design, cabinetry and other wood replacement projects.

Sheets are strong, yet lightweight and can be ordered in a wide range of sizes, thicknesses and colors. Celtec sheets are free of lead, cadmium, barium and zinc and have passed all three UL 1975 requirements.

Celtec is recommended for industrial and commercial signage. It readily accepts virtually any form of graphic overlay (print, paint and photo mounting). Celtec is also easy to cut and shape, making it an excellent choice for three-dimensional exhibits, displays and stage sets.

### Features & Benefits

- Celtec is lightweight, easy to handle and easy to work with.
- Celtec meets UL94 5V, UL 1975 and has a flame spread of 20 according to ASTM E84.
- Water resistant Celtec has a closed cell structure and extremely low water absorption values.
- Celtec's smooth matte surface is ideal for graphics, printing and laminating.
- Celtec is more color-fast than other foam PVC products.
- Celtec has an excellent strength to weight ratio as shown in the screw and staple pull test data.
- Celtec has excellent insulating characteristics.
- Celtec contains no lead, cadmium or zinc.
